SUMMARY

Final-year Computer Science student with hands-on experience building end-to-end data pipelines and pattern-recognition systems in Python — including time-series anomaly detection, large-scale text classification, and real-time inference deployment. Comfortable working independently through the full analytical lifecycle: data collection, cleaning, model building, evaluation, and deployment. Looking to bring that same systematic, detail-driven approach to security monitoring and threat detection.

RELEVANT TECHNICAL FOUNDATION

- **Network Security Coursework:** Completed university coursework in Network Security (Keamanan Jaringan Komputer), covering Linux/Ubuntu-based security fundamentals, packet capture and traffic analysis with Wireshark, and introductory ethical hacking techniques.
- **Capture The Flag (CTF):** Participated in a CTF competition, applying hands-on problem-solving to introductory offensive/defensive security challenges.
- **Anomaly & Pattern Detection:** Built time-series forecasting models (SARIMA + LSTM) to flag deviations from expected trends in national health datasets — the same core logic used to separate normal vs. abnormal behavior in network/log monitoring.
- **Large-Scale Data Triage:** Designed a full NLP preprocessing pipeline that cleaned and standardized 10,000+ noisy real-world text records before classification — directly transferable to parsing and normalizing high-volume log/alert data.
- **Python & Automation:** Used Python daily across every project for data ingestion, preprocessing, model training, and evaluation scripting.
- **SQL & Databases:** Certified in Database Programming with SQL (Oracle Academy) — able to query and cross-reference structured data quickly.
- **Fast Ramp-Up in New Domains:** Solo-built an end-to-end forecasting system and, separately, delivered a production clinical-system integration on a strict 5-week deadline — evidence of picking up unfamiliar technical environments quickly and working reliably under time pressure.

PROJECTS

Data Scientist & AI/ML Engineer | Chilicare

Dec 2025 – Apr 2026

- Engineered a CNN-based image classification model (transfer learning), optimized for lightweight real-time inference on mobile devices via TensorFlow Lite.
- Owned the full pipeline end-to-end: data collection, preprocessing, augmentation, training, hyperparameter tuning, and evaluation.
- Collaborated across disciplines to ship the model into a production mobile app; selected for the MSU iReX International Expo.

NLP / Text Analytics Developer | Social Media Sentiment Analysis

Feb 2025 – Apr 2025

- Built a Naïve Bayes classifier reaching 85% accuracy on a noisy, imbalanced Indonesian tweet corpus, exceeding the course benchmark.
- Implemented a full preprocessing pipeline (tokenization, stopword removal, normalization) to standardize 10,000+ raw entries before training.

Data Analyst & Predictive Modeling | AIDS Forecasting (BPS national data)

Aug 2024 – Oct 2024

- Built a dual-model forecasting system (SARIMA + LSTM) to detect and predict trend deviations in official public health statistics, outperforming single-model baselines.
- Owned 100% of the codebase solo — ingestion, preprocessing, training, and visualization — and translated statistical output into clear, actionable findings for non-technical stakeholders.

EXPERIENCE

FullStack Web Developer | Rumah Sakit Dr. Achmad Mochtar

Jul 2025 – Aug 2025

- Delivered and maintained a clinical information system, integrating it into the hospital's main production system within a strict 5-week timeline while handling sensitive patient-record data.

Committee Member | Pekan Kreativitas Mahasiswa, Andalas University Fair

Jan 2025 – Jun 2025

- Applied UI/UX knowledge within a cross-functional student organization delivering IT-driven campus events.

EDUCATION

B.Sc. Computer Science (In Progress)

Andalas University, Padang, Indonesia — Aug 2022 – Jun 2026

Relevant Coursework: Network Security (Keamanan Jaringan Komputer) — Linux/Ubuntu security fundamentals, Wireshark traffic analysis, introductory ethical hacking

CERTIFICATIONS

- Database Programming with SQL — Oracle Academy (Jul 2023)

SKILLS

Technical: Python, Linux/Ubuntu, Wireshark (Packet/Traffic Analysis), Network Security Fundamentals, Machine Learning, Deep Learning, SQL/Databases, Data Pipeline Design, Mobile Programming, UI/UX Design, SDLC

Professional: Fast Independent Learner, Analytical Problem-Solving, Teamwork, Communication, Adaptability under Deadline Pressure, Project Management
